INTRODUCTIONS

- Your experience with web development?
- Your experience with Java EE development?
- What do you want to get from this session?
- Experience with Grails, GWT, Rails, Spring MVC, Wicket, Tapestry or Play?
Who is Matt Raible?

Blogger on raibledesigns.com

Founder of AppFuse

Web Framework Connoisseur

Father, Skier, Cyclist
SESSION AGENDA

- The Problem with Web Frameworks
- The Candidates
- Comparison Points
- The Matrix
- Conclusion
- Q and A
THE PROBLEM
HOW DO YOU CHOOSE?
ELIMINATE, DON'T INCLUDE
I've got a new way for you to build web apps!
... while I'd *love* to see life made simpler for Java web developers, and a lot of the things happening in Struts2 are going that way -- it won't be me doing it.

I've gone over to the dark side :-) and much prefer to develop in Rails -- for the conciseness mentioned above, but also because I don't ever have to do a "build" or "deploy" step during my development cycle any more. But you guys and gals need to be reminded that *this* is the kind of thing you are competing against if you expect to attract Rails developers ... or to avoid even more "previously Java web developer" defectors like me :-).

-- Craig McClanahan, 10/23/2007

JAMES GOSLING ON JSF

http://www.youtube.com/watch?v=9ei-rbULWoA#t=47m
2007: 6 IMPORTANT FACTORS

- Request, Component or RIA Framework
- Ease of Development
- Project Community
- Project Future and Roadmap
- Maintenance
- Technical Features
CHOOSING A FRAMEWORK

- Choose a short list of frameworks to prototype with.
- Create an application prototype with each framework.
- Document findings and create a matrix with important criteria.
- Create presentation to summarize document.
- Deliver document, presentation and recommendation.
2011: NOW THERE’S 20

1. Developer Productivity
2. Developer Perception
3. Learning Curve
4. Project Health
5. Developer Availability
6. Job Trends
2011: COMPARISON POINTS

7. Templating
8. Components
9. Ajax
10. Plugins or Add-Ons
11. Scalability
12. Testing Support
13. i18n and l10n
14. Validation
15. Multi-language Support (Groovy / Scala)
16. Quality of Documentation/Tutorials
17. Books Published
18. REST Support (client and server)
2011: COMPARISON POINTS

19. Mobile / iPhone Support

20. Degree of Risk

DAVID POLLACK’S LIFT RATINGS

- Developer Productivity: Lift gets a 11, Rails gets a 5, most Java-based frameworks get a 1 or less.
- Developer Perception: Every web framework gets a 1.
- Learning Curve: Lift gets a 2.
- Job Trends, yep, it's zero.

* Matt's scale is 0-1 and my ratings are on Matt's scale, except mine goes to 11.

On the Seam / JSF side, the 20 sessions each take up about 800 KB adding up to around 16 MB total. On the Wicket side the 20 sessions add up to around 1.5 MB.

+ Lots of banter between Peter and Seam developers @ http://bit.ly/3X50Gc
Peter’s Observations:

- Grails was far more productive than Tapestry 5.
- Grails still has some ways to go in terms of performance.
- Overall, Wicket is fastest, with Tapestry coming a close second.
- Wicket takes up the least amount of heap.
- Session usage of the Seam + JSF combination is significantly higher compared to the rest.
PROS AND CONS
GRAILS

Pros

- Easy dynamic language transition for Java Developers
- Groovy
- Plugins for all types of applications

Cons

- Groovy learning targets Java Developers
- Stack traces are horrendous
- Knowledge of underlying frameworks not required, but helpful
GWT

Pros

- Write Java => Produces Optimized JavaScript
- Easy to learn and develop with standard Java Tools
- Vibrant Community

Cons

- You have to know Java
- Slow to compile, difficult to test
- More like a JSP Tag Library than a web framework
RUBY ON RAILS

Pros

- Easy to learn and understand for Web Developers
- Lots and lots of documentation
- Passionate Community

Cons

- Slightly less performant by default
- Dynamic language means more tests
- Development Tools and Debugging
SPRING MVC

**Pros**

- Easy Configuration with Annotations and Conventions
- Integrates with many view options seamlessly: JSP / JSTL, Tiles, FreeMarker, Excel, PDF, JSON
- Excellent REST Support

**Cons**

- Instant reload not built-in, need JRebel or Spring Roo
- No open development process, need to be SpringSource
- Ajax requires 3rd-party library (can be a good thing!)
VAADIN

Pros

- Uses GWT API for developing view.
- Vibrant Community and company backing.
- Excellent Themes and Layouts support.

Cons

- Large memory footprint, state stored in session.
- All client interactions communicate with server.
- Joonas keeps telling me my cons are wrong.
WICKET

**Pros**

- Great for Java Developers
- Tight binding between pages and views
- Active community - support from creators

**Cons**

- No Jobs or Developers
- Stateful by default
- HTML Templates live next to Java code by default
TAPESTRY

Pros

- Live Class Reloading
- Development emphasis on performance and scalability
- Excellent Exception Reporting

Cons

- No Jobs
- Prototype baked in for JS Library
- Annotations vs. Conventions

CONCLUSION

What if there is no “best” web framework?

DON’T LISTEN TO ME!
CHOOSE YOUR OWN!

Prioritize a list of features that are important to your application.

Pick 3-4 frameworks and do a 1-week spike with each, developing the same application.

Document and rank each framework against your list of features.

Calculate and choose!
